SUMMARY

AI Systems Engineer specializing in **AI agent** systems, **RAG pipelines**, and production-grade full-stack platforms. Published open-source npm packages with “2000+” combined downloads. **7x hackathon** achiever across national-level competitions, including multiple 1st Prize wins. Adept at leveraging microservice based backends, performance optimized frontend systems, and cloud native DevOps strategies to deliver extensible, high availability solutions that drive quantifiable operational impact.

EDUCATION

Chandigarh University

Bachelor of Engineering

Mohali, India

July 2024 - July 2028

SKILLS

Languages	C++, JavaScript, TypeScript, Java, SQL, Python, Rust
Frameworks	React, Node.js, MongoDB, Express, Next.js, RESTful APIs, Langchain, MCP, Agentic AI, Flutter
Tools	Git, Docker, AWS, GCP, n8n
Soft Skills	Team Management, Adaptability, Leadership

PROJECTS

WebScope – *Web Renderer for AI Agents* | [Link](#) Node.js, Headless Browser, DOM Parsing

- Built a headless rendering pipeline that strips DOM noise and converts raw HTML into structured, LLM-readable text/markdown.
- Engineered a high-performance browsing layer enabling scalable, low-cost interaction with web.

Stride – *Autonomous post-deal operations engine* | [Link](#)

Tool-Calling Agents, Prisma, QStash

- Built a **4-agent, event-driven pipeline** (Research → Orchestrator → Communication + Project) where each agent is a genuine tool-calling loop the model chooses which tool to call, and the code only executes what's requested.
- Ships real-world side effects, not previews. Sends live emails via Resend, schedules 48-hour follow-ups via **Upstash QStash**, and re-activates the entire agent pipeline autonomously.

Builderly – *AI first technology studio platform* | [Link](#)

Next.js 15, Row-Level Security, Postgres

- **Architected a 3-tier RBAC system** (Owner / Admin / Member) across 2 account-type flows (builder vs. client), with defense-in-depth authorization: middleware session refresh + server-side role verification + Postgres Row-Level Security.
- Built a fully dynamic, **database-driven CMS** - every section (Products, Services, Work, Network, Incubator) is toggleable and live-editable from an owner dashboard, with graceful degradation if config is missing.

Engram – *Autonomous Memory Dashboard* | [Link](#)

FastAPI, Knowledge Graph, PGVector

- Full lifecycle implementation, not a partial integration. All 4 Cognee operations (**remember / recall / improve / forget**) are load-bearing across 2 integration paths - local SDK and a hosted Cognee Cloud tenant - verified end-to-end by 6/6 passing integration tests.
- **Models memory as a 7-state lifecycle** (Active, Reinforced, Contested, Superseded, Decaying, Forgotten, New) with graph-derived contradiction detection the differentiator over vector-store RAG or append-only memory.

ACHIEVEMENTS

- Built and published 6 open-source npm packages including WebScope, Summon, CIPHERA, Casting, Harvest and Maestro with 2000+ combined downloads | [Link](#)
- **1st Runner-Up, AI NEXUS 2026 (SAS)** | [Link](#) Apr 2026
- **Best Code Clarity Award**, BharatTech Experience 3.0 | [Link](#) Apr 2026
- **Top 15 Finalist, India Innovates 2026 - Bharat Mandapam, New Delhi** | [Link](#) Mar 2026
- **1st Prize**, PhysX Fusion 2026 (Innovfest) | [Link](#) Feb 2026
- Consolation Award, Engineering Solutions for Social Impact 2025 (IEEE Delhi Section SIGHT) for StreetVoice, a civic issue-reporting platform | [Link](#) Sep 2025

POSITIONS OF RESPONSIBILITY

- Directed end-to-end operations of a technical chapter as **Chairperson, IEEE Photonics Society** managing workflows, communications, and cross-team coordination; executed **8+ events**, workshops, and hackathons per semester.
- Served as **Google Cloud Lead**, Google Developers Group CU organized cloud-focused hackathons and hands-on technical workshops for the student community.

HOBBIES & EXTRA CURRICULAR

Hobbies Playing Chess, Solving Cube and Music (Flute, Piano)
